P-2105

Dear Sirs and Madams

I am very disturbed to learn of PG&E's plan to remove cold water from Lake Almanor and Butt reservoir as part of the FERC program 2105 relicensing. I believe that such a move would cause major environmental harm to those lakes while providing a very minor improvement to trout habitat further downstream. I am therefore asking for your help in putting a stop to this plan.

I believe that Alternative D, as presented during an April 27, 2005 meeting in Chico, is the best plan of all. Alternative D calls for upstream mitigation, or in other words removal of some barriers to fish migration, streambed restoration and streamside shade restoration.

Sincerely

Debra Fau
