Re: FERC Project 2105 Settlement Agreement

Dear FERC Commissioners:

I am writing this letter to you not only as a resident of Lake Almanor but also in my official capacity as Vice President of the Lake Almanor Country Club Homeowner's Association.

I have been closely following this issue since the inception of this Project almost 20 years ago. The basic premise for this project was to protect the fish approximately 9 miles downstream. If the Project was not done, the fishery would be lost. Not once during this 20 year period have I heard or read about fish dying or being depleted on this river. The historical evidence clearly shows that the premise for this Project is flawed.

There was a Settlement Agreement reached in 2004 which specified the number of CFM which could be released from the Canyon Dam and Belden Dam during the summer months. I believe that this Agreement for water release should be implemented and not changed. Remember, PG&E has agreed to fund \$5,000,000 to improve fish habitat downstream.

Based upon today's information, I am urging you to officially approve the 2004 Settlement Agreement as agreed upon.

Thank your for your time and consideration in this matter.

Regards,

Douglas C. Bui
