

Ellen Gemma, Chester, CA.

I am writing to express our grave concerns about the possibility that cold water from Lake Almanor will be sent downstream.....this will be catastrophic to our whole basin which is dependent upon this lake. It is already a warm and shallow lake and making it warmer will destroy it. We already are suffering from drought and the resultant algae bloom in this huge lake and now - the recent Dixie Fire. If FERC allows this water to drain from our lake, thousands of people will be impacted and it will be the death knell for Chester and all around it. Please do not let this happen.
