To Whom It May Concern, the Thermal Curtain proposal has been around for many years, and for all those that enjoy Lake Almanor, they have been fighting it.

The lake has been low for many years, and taking out more water will do more harm to the lake. As it gets more shallow each year, the weeds are getting worse along shorelines, and the algae bloom is now becoming a huge problem and the water causes harm to the animals and humans. PGE already lets lots of water out, after July 4th for the power houses and lakes down the Feather River. Taking out more water, and that being the cooler water, causes the lake to warm and become more shallow, damaging the fishing and wildlife currently in and on the lake. Please do not force the thermal curtain project onto Lake Almanor where no one wants it. Thank you, Diana Ebert
